

Cervical Cancer (Risk Factors)

Donated on 3/2/2017

This dataset focuses on the prediction of indicators/diagnosis of cervical cancer. The features cover demographic information, habits, and historic medical records.

Dataset Information

Additional Information

The dataset was collected at 'Hospital Universitario de Caracas' in Caracas, Venezuela. The dataset comprises demographic information, habits, and historic medical records of 858 patients. Several patients decided not to answer some of the questions because of privacy concerns (missing values).

I would like to know the description of the variables. For example, what is the difference between "STDs:HPV" and "Dx:HPV"?
