Dataset Information

Additional Information

This data was used by Hong and Young to illustrate the power of the optimal discriminant plane even in ill-posed settings. Applying the KNN method in the resulting plane gave 77% accuracy. However, these results are strongly biased (See Aeberhard's second ref. above, or email to stefan@coral.cs.jcu.edu.au). Results obtained by Aeberhard et al. are :

RDA : 62.5%, KNN 53.1%, Opt. Disc. Plane 59.4%

The data described 3 types of pathological lung cancers. The Authors give no information on the

individual variables nor on where the data was originally used.

Notes:

- In the original data 4 values for the fifth attribute were -1. These values have been changed to ? (unknown). (*)
- In the original data 1 value for the 39 attribute was 4. This value has been changed to ? (unknown). (*)

SHOW LESS ^

Has Missing Values?

Yes

This allows for the sharing and adaptation of the datasets for any purpose, provided that the appropriate credit is given.

Variables Table ^

Variable Name	Role	Type	Description	Units	Missing Values
class	Target	Categorical			no
Attribute1	Feature	Categorical			no
Attribute2	Feature	Categorical			no
Attribute3	Feature	Categorical			no
Attribute4	Feature	Categorical			yes
Attribute5	Feature	Categorical			no
Attribute6	Feature	Categorical			no

Variable Name	Role	Type	Description	Units	Missing Values
Attribute7	Feature	Categorical			no
Attribute8	Feature	Categorical			no
Attribute9	Feature	Categorical			no
Attribute10	Feature	Categorical			no
Attribute11	Feature	Categorical			no
Attribute12	Feature	Categorical			no
Attribute13	Feature	Categorical			no
